Step-by-step guide

Follow these simple steps and turn a palm into a precious memory.
Your personal **bondee**.

For more information visit our website.

This set contains two components¹: Component ①: Colour mass, Component ②: Modelling mass

Remove each of the components using the provided wooden spatulas.

Use spatula no. ① only for component ① and spatula no. ② only for component ②.²

Use a suitable surface to place the components on as they may leave grease stains.

Keep the final mass firmly in your closed fist for about 5 minutes. You do not have to apply much pressure, just wait for the material to harden.

¹ The mass has been tested and is skin-friendly.

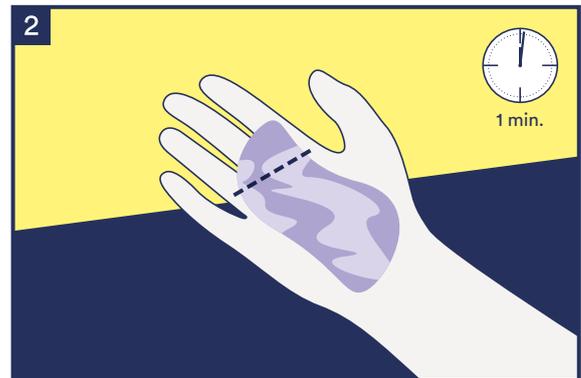

² If component 1 & 2 come into contact before you start kneading them together, they will harden whilst still in the jar.

³ If you have a white set, please knead extra thoroughly to make sure that the components are entirely mixed.

⁴ A large hand may need the entire volume, while a smaller hand may only need half. For smaller and children's hands, one set will likely give you 2 handprints.

Further product information can be found in the package insert.

Important notice: Do not allow component 1 & 2 to come into contact even slightly before you are ready to begin your project, as the materials will harden whilst still in the jar if they touch.

Now knead the two components together quickly and firmly for approx. 1 minute until the mass has a uniform colour. No white streaks from the modelling mass (component ②) should be visible, otherwise the material will not harden.³

As every hand is different in shape and size, you may require less than the provided amount for one handprint.⁴

The mixing ratio of component ① and component ② must be 1:1 to guarantee that the material will harden. We therefore recommend kneading the complete amount of each component together, then place it in your hand and remove a little at a time until the amount feels comfortable to hold in your hand.

Gently release your fist.

Your personal **bondee** is now finished!
